Protocol

The ENMAT Pulse Acquisition module designed for use with any device that provides a pulsed signal, such as energy, gas, water and heating meters.

Measured in such a way to be communicated to a remote point via RS485 serial link. It allows for Pulse based meter cabling to be extended from the recommended 100 meters by using Modbus, which can be ran over longer distances such as 1km.

Pulse cabling - Pulse Acquisition Module - Modbus cabling - Destination such as energy data logger.
