

## ENMAT Wireless Data Logger

- ◆ Records data from wireless devices and wired Modbus RTU
- ◆ Integrated Quad-band GSM/GPRS modem
- ◆ Ethernet interface for easy connect

The ENMAT Wireless Data logger is ideal for small, medium and large buildings that require the centralisation of energy related data.

The unit comes with built in Ethernet, WIFI and GSM/GPRS modem to suit various installation requirements.

The data logger has a built in SMTP Email Server to send energy related data to ENMAT Cloud based software via a CSV file.

This user friendly system allows for an easy setup and configuration. This means solutions can be rapidly Installed, without major disruption to the site.

## ENMAT Wireless Data Logger

- Links to Modbus enabled meters to retrieve, log and forward Modbus readings

### Energy Metering

The ENMAT Wireless Data Logger has Modbus for communication with additional meters and sensors, making it the most versatile energy logger on the market.

Energy consumption is recorded at selectable intervals, typically ½ hourly.

This data is stored on the ENMAT Data Logger and automatically sent to the ENMAT Cloud Server.
