

ENMAT Wireless Meter

- ◆ Quick and easy install
- ◆ Long range 260M to Mesh Node, 25M to Energy Meter Node
- ◆ Auto, wirelessly connects to ENMAT Premium Data Logger

The ENMAT Wireless Meter allows Energy Managers to monitor electricity consumption wirelessly, without the need for expensive metering solutions or comprehensive cabling.

The ENMAT Wireless Meter clamps around the electrical circuit and transmits wirelessly consumption.

Wireless communication significantly reduces time, cost and disruption involved in deploying sub-metering installations.

Energy Consumption data is automatically logged with an ENMAT Data Logger. Logged data is then transmitted from the logger to ENMAT Cloud Software.
